

JOSHUA BLUE-JACK

Full Stack Engineer

Winnipeg, MB | 431-277-5564 | bluejackjosh@gmail.com | [GitHub](#)

PROFILE

- Full stack software engineer with 5+ years building production web applications end-to-end, combining Django/DRF back-end services with React/TypeScript.
- Django and Python experience designing REST APIs, modeling PostgreSQL schemas with Django ORM, implementing JWT authentications.
- Bachelor's in computer science, master's in information management, and an Advanced Diploma in Technology Management.
- Strong front-end engineering skills in JavaScript/TypeScript, Redux, React Hooks, React Router, with attention to responsiveness and accessibility.
- Comfortable owning complex technical problems from requirements and architecture through implementation, testing, code review, and deployment.
- Experienced collaborating with product managers and business stakeholders in implementing requirements for software products in remote Agile/Scrum teams.

TECHNICAL SKILLS

Back-End: Python, Django, Django REST Framework (DRF), REST API design, JWT authentication, Django ORM.

Front-End: React.js, TypeScript, JavaScript (ES6+), Redux, React Hooks, React Router, Context API, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design.

Databases: PostgreSQL, SQL, Django ORM.

Cloud & DevOps: AWS (S3, ECS familiarity), Docker, Git, GitHub, CI/CD workflows.

Tools & Practices: JIRA, Postman, Figma, VS Code, ElasticSearch, Kibana, Agile/Scrum, code reviews, unit testing, pair programming, cross-functional collaboration.

EXPERIENCE

Full Stack Developer (Django and React) | Crib365, Abuja NG — Remote June 2021 – Jan 2024

- Designed and built back-end services in Django and Django REST Framework that powered the core rental listing feature.
- Modeled relational databases using Django ORM, handling migrations, and optimizing queries with `select_related` and `prefetch_related`, which reduced list-page response times and lowered database load under real user traffic.
- Implemented secure JWT-based authentication endpoints and role-based permissions using Django REST Framework, which enabled tenant and landlord accounts ensuring reliable, stateless session handling.
- Engineered search, filtering, sorting, and pagination workflows in Django and DRF by combining custom queryset methods with Django q, which allowed users to navigate large listing datasets quickly and consistently across the platform.
- Architected a distributed task queue with Celery and Redis to power real-time sports score ingestion across 11 leagues, polling ESPN APIs every 30–60 seconds per sport via Celery Beat scheduling.
- Containerized a multi-service application using Docker Compose orchestrating 8 services with health checks ensuring dependent services only start after upstream containers are ready.
- Worked in Agile sprints using Git, GitHub, and pull-request based code review, which kept work transparent, enforced code quality, and supported steady, predictable delivery of product features.

React Developer | Rakoomi, Winnipeg MB — Remote

Mar 2024 – Feb 2026

- Analyzed user story designs in Figma with product designers to elicit technical requirements and align system functionality with user expectations based on ticket support trends.
- Maintained user story documentation in Figma, working closely with product designers to elicit technical requirements and align system functionality with user expectations.
- Conducted UAT and functional testing cycles, developing test cases, logging defects, and validating software fixes against technical requirements to ensure system stability before deployment.
- Implemented user stories from Figma designs as reusable React components, accelerating feature delivery and ensuring visual consistency across the app.

Junior Full-Stack Developer | Microverse, San Francisco USA — Remote

Sept 2019 – May 2021

- Completed an intensive full-stack software engineering program using React, JavaScript, HTML5, CSS3, and REST APIs, building production-style applications end-to-end and strengthening both front-end and back-end engineering fundamentals.
- Built interactive single-page applications and integrated them with REST APIs using Fetch and Axios, ensuring seamless state management, and handling asynchronous data.
- Collaborated with remote teammates through Git, GitHub, pull requests, pair programming, and peer code reviews, which reinforced disciplined version control habits and the communication standards expected in modern engineering teams.
- Improved software reliability through iterative testing, debugging, refactoring, and written technical documentation, which supported onboarding, maintainability, and knowledge transfer across team-based projects.
- Practiced Agile/Scrum delivery through daily stand-ups, sprint planning, and retrospectives, which internalized the communication and iteration habits I continue to apply in every subsequent role.

RECENT PROJECT

RFI-Filer Web Application (React + Django REST Framework) |

Mar 2026

- Designed and built a full-stack action items tracking application with a React front-end and Django REST Framework back-end, handling data modeling and API design.
- Implemented JWT authentication in DRF and protected React routes with Axios interceptors, which enabled secure session handling and reliable access to authenticated features across the app.
- Built search, filtering, pagination, and detail views across React components and DRF viewsets.
- Debugged and resolved all authorization errors, route mismatches, token lifecycle bugs, API end point configuration.

EDUCATION

- Advanced Diploma in Technology Management - **Red River College Polytechnic, Winnipeg, MB (Aug 2024)**
- Master of Information Management - **Ahmadu Bello University, Zaria, Kaduna State, Nigeria (Oct 2023)**
- Bachelor of Science in Computer Science - **Bowen University, Iwo, Osun State, Nigeria (Jul 2019)**
